

## **Topic: Green Hydrogen as a Decarbonization Key for Transportation**

### **Abstract**

“This presentation highlights the key roles of green hydrogen in decarbonizing hard-to-abate transport sectors across various transport modes such as heavy-duty freight, aviation, maritime. Furthermore, the presentation will cover Thailand’s current readiness, opportunities, and challenges in adopting green hydrogen for transport decarbonization, offering strategic insights into how the country can leverage its renewable energy potential, industrial base, and regional connectivity to become a future hub for clean mobility solutions.”
